JARKOM webserver

KODE PYTHON dengan nama webserver

```
#import socket module
from socket import *
import sys # In order to terminate the program

serverSocket = socket(AF_INET, SOCK_STREAM)

# Prepare a sever socket
serverPort = 6790
serverSocket.bind(('', serverPort))
serverSocket.listen(1)

while True:
    # Establish the connection
    print('Ready to serve...')
    connectionSocket, addr = serverSocket.accept()

    try:
        message = connectionSocket.recv(1024).decode()
        if not message: # Proteksi jika message kosong
            continue

        print(f"{message.split()[1]}")

        filename = message.split()[1]
        f = open(filename[1:], encoding="utf-8")

        outputdata = f.read()

        # Send one HTTP header line into socket
        header = "HTTP/1.1 200 OK\r\nContent-Type: text/html\r\n\r\n"
        print(f"Mengirim Header ke Browser:\n{header}")
        connectionSocket.send(header.encode())

        # Send the content of the requested file to the client
        for i in range(0, len(outputdata)):
            connectionSocket.send(outputdata[i].encode())

        connectionSocket.send("\r\n".encode())
        connectionSocket.close()
        print("File berhasil terkirim!\n")

    except IOError:
        print("File tidak ditemukan!\n")
        connectionSocket.send("HTTP/1.1 404 Not Found\r\n\r\n".encode())
        connectionSocket.send("<html><body><h1>404 Not Found</h1></body></html>\r\n".encode())
        connectionSocket.close()

serverSocket.close()
sys.exit()
```

index.html

```

<!DOCTYPE html>
<html>
<head>
  <title>Test Server Python</title>
</head>
<body>
  <h1>Server HTTP Python Berhasil Jalan </h1>
  <p>Ini adalah halaman HTML sederhana dari server socket Python.</p>

  <h2>Informasi</h2>
  <ul>
    <li>Nama: Frans</li>
    <li>Prodi: Informatika</li>
    <li>Status: Server aktif </li>
  </ul>
</body>
</html>

```

Di run dari pythonnya

```

PS D:\KULIAH\SEMESTER 4\PYTHON>
Ready to serve...
/index.html
Mengirim Header ke Browser:
HTTP/1.1 200 OK
Content-Type: text/html

File berhasil terkirim!

Ready to serve...
Ready to serve...

```

Jalankan di browser dengan port yang sama dari kode python

# Server HTTP Python Berhasil Jalan

Ini adalah halaman HTML sederhana dari server socket Python.
